

## You know your environment has been breached. Now what?

Horizon3.ai offers a **free** post-breach assessment utilizing NodeZero.

**NodeZero** is our fully automated cyber attacker that emulates the tools, tactics, and techniques of real-world attackers, so you can find and **fix what matters NOW**.

## Post-Breach Assessment

**Kick off in minutes - PBA runs automatically – Download 1-click report**

1. Run PBA from the same network submit where the breach occurred (for example, your SolarWinds server).
2. PBA will maneuver using the same tactics as an attacker – chaining together harvested credentials, misconfigurations, dangerous defaults and exploitable vulnerabilities.
3. The PBA report will show the credentials and data we could compromise.

**You should assume the attacker could access at least these credentials and data resources and act accordingly.**

## OUR STORY

Founded in 2019 by former US Special Ops cyber operators, we see the cybersecurity world for what it is - bloated security tools, reports riddled with false positives, "checkbox" security, and so-called expert consultants. We want you to spend your limited IT security resources fixing what matters.
